

Coatings and Application

Coatings

All of our tools are available in a variety of application specific surface treatments and coatings. Please see individual tool listings for stocked treatments and coatings. Other treatments and coatings are available upon request. These surface treatments and coatings are designed to enhance performance as well as the life of the tool. The chart below is a handy reference outlining the surface treatment and coating composition as well as the suggested application. If the material you are preparing to machine is not listed, please give us a call and we can help.

Code No.	Coating No.	Characteristics	Application	
	C-1*	88	A general purpose coating which has excellent wear resistance, reduces friction and prevents galling.	Most ferrous materials. Although it's unlikely, galling may occur in titanium and titanium alloys. (Not recommended for aluminum).
	C-4	89	An extremely hard coating which has outstanding wear resistance, reduces friction and prevents galling.	Most ferrous, non-ferrous and non-metallic materials. Very effective at higher speeds. Although it's unlikely galling may occur in titanium and titanium alloys.
	C-5	86	A thin hard coating that improves lubricity and increases oxidation resistance. Specifically designed for machining abrasive and gummy materials.	Suitable for machining aluminum alloys, high silica aluminum, cast iron, high temperature alloys, stainless steel and glass filled plastics. Not recommended for machining carbon steels.
	C-6*	06	Outstanding self-lubricating properties, Silver/Gray in color.	For machining aluminum, (silicon content less than 10%), copper and titanium.
	C-7*	83	A very hard coating recommended for harder alloys which has very good wear resistance, reduces friction and prevents galling.	Titanium, titanium alloys, nickel-base alloys, stainless steel and cast iron. Effective at higher speed. Not recommended for wrought aluminum, copper or brass.
	C-10	70	Excellent coating that provides high oxidation resistance and high temperature wear resistance.	Very effective in wet/dry milling of steels, cast iron, aerospace inconel and titanium alloys.
	C-11	85	An extremely hard coating very similar to C7 with outstanding wear resistance. C-11 has a higher aluminum content which makes it harder and smoother than C7.	Very effective in the same materials as C7. Excellent for small depths of cut and excels in high speed and dry machining applications.
	C-19	19	Multilayer, extremely hard, smooth temperature resistant.	Hard Machining 50-70 HRC, Dry Machining.
	C-21*	61	Synthetic diamond. Low coefficient of friction. Approximately three times harder than C4.	High abrasive applications, graphite, fiberglass, ceramics and composites.
00		No Coating		

* Available as Non-Stock Standard

Triple Threat™ Three Flute Rougher/Finisher, Inch

High Performance Carbide

The Triple Threat™ tool is a multi-patented three flute high performance carbide end mill designed to finish and rough in aluminum and non-ferrous metals. The high shear, 45 degree helix and improved inter-flute geometries enhanced chip evacuation and permit increased chip loads as well as aggressive feed rates.

ALDH Three Flute

Technical Chart

The ALDH is the rougher of choice when optimum material removal rates are the objective. The combination of progressive geometries result in a cutting tool intended for full engagement cuts at increased feed rates. Slotting cuts of 1x the diameter or more are normally recommended. 50% greater IPM versus competitors 2 flute design is a conservative starting point.

Carbide Feeds and Speeds Chart for Non-Ferrous Materials

ALDH-C Three Flute

Technical Chart

ALDH-C series combines the performance of the ALDH series with a truncated knuckle form to manage chips and Horse Power. It is designed for freer cutting without sacrificing work piece surface finishes. This unique O.D. form also aids in chip control and management in gummy, non-ferrous materials. The tools are available from stock in stub and standard lengths with coatings to match your particular applications.

Carbide Feeds and Speeds Chart for Non-Ferrous Materials

ARF Two Flute Series

High Performance Carbide

- Rough and Finish
- Higher Helix Aids in Chip Removal
- High Performance Carbide

- Available Upon Request:
 - Radius Ends
 - Coolant Grooves
 - Additional Coatings

The ARF Series is a time-honored workhorse in our aluminum cutting tool family. Designed as a 2 flute, rougher/finisher, this tool can pull "double duty" in your aluminum and non-ferrous applications. The high helix angle provides exceptional shearing action and chip removal. Available in lengths ranging from stub for aggressive roughing, to extended lengths for tall side milling cuts.

Carbide Feeds and Speeds Chart for Non-Ferrous Materials

 **DATA FLUTE**™

HSM Two Flute, Reduced Neck

Technical Chart

The HSM is a 2 flute rougher/finisher that uses the geometries of the ARF series and couples them with an extended reach design. The stub flute length, in conjunction with a wide range of reach lengths, makes the HSM series a great choice for roughing in aluminum and other non-ferrous materials in hard to reach depths of cuts.

Carbide Feeds and Speeds Chart for Non-Ferrous Materials

HSM Materials		Aluminum Alloys	Aluminum Cast	Aluminum	Copper	Brass	Magnesium

HVM-2, Two Flute

Technical Chart

The High Velocity Machining Series (HVM) is designed to perform at the level that its name suggests. By using shallow depths of cut, at very high speeds, this extended reach design will rough in non-ferrous applications from peripheral cuts to deep pockets. This tool is ideal for the machine tool that has ample RPM and feed rate capabilities, but may have some horsepower or torque restrictions.

Carbide Feeds and Speeds Chart for Non-Ferrous Materials

HVM-3, Three Flute with Reduced Neck and Radius

Technical Chart

Our High Velocity Machining-3 Series (HVM-3) builds on the successes of our HVM-2 tools. The HVM-3 can really shine in applications where the machines may not achieve the high RPMs for which the HVM-2 was designed, but have the torque and horsepower to take advantage of the 50% increase in tooth passage (3:2) of our HVM-3. The HVM-3 is available in a number of stocked radii.

HVMag-3

Three Flute, Inch and Metric

High Performance Carbide

Our HVMag-3 is a 3 flute tool, with field tested, patented geometries designed specifically for the newer generation of high speed machining centers. We have produced an exceptionally well-balanced tool, with superior chip flow. This tool is best used for speeds up to 20,000 rpm and feed rates of up to 1,000 inches per minute. Best performance is achieved in spindles designed for high speed, three flute tools and machining.

ARF-BN, Two Flute Ball Mill

Technical Chart

The ARF-BN combines the proven geometry of our ARF two flute series with a precision ground, full, ball-nose radius. The high helix and high clearance angles provide a freer cutting ball with superior shearing properties. The ball nose is also ground with a vibration protection margin. When your non-ferrous applications require contour or 3-D work, the ARF-BN should be your tool of choice.

Carbide Feeds and Speeds Chart for Non-Ferrous Materials

HSM-BN, Two Flute Ball Mill

Technical Chart

The HSM-BN is a two flute rougher/finisher that couples ARF geometries with an extended reach design. The tool provides all the advantages of the ARF's high helix, high clearance and anti-vibration margin, in a necked tool with a stub length of cut. This is your "go to" tool for extended reach, aluminum applications that call for a ball nose.

Carbide Feeds and Speeds Chart for Non-Ferrous Materials

HSM-BN Materials		Aluminum Alloys	Aluminum Cast	Aluminum	Copper	Brass	Magnesium

HVM-BN Two Flute Ball Mill with Reduced Neck

Technical Chart

This is a new series that provides HVM geometry in a 2 flute, precision ground, ball nose configuration. The HVM has a slower helix than our HSM. This helix angle can be more appropriate in applications where operators are seeking to limit or control vertical cutting forces in the Z direction.

Carbide Feeds and Speeds Chart for Non-Ferrous Materials

AFI Three Flute

Technical Chart

The AFI 3 flute Aluminum mill is the perfect choice for your finishing applications. The polished O.D. cylindrical margin along with material specific geometries generates an excellent surface finish. The addition of a Wiper Flat brings this series of tool to the perfect choice. The AFI series is available in stub, standard, medium, long and extra long length of cut.

AMF, Multi-Flute

Technical Chart

The Aluminum Multi-Flute Series (AMF) features patented geometries with a flute form that reduces unwanted harmonics. The AMF provides unparalleled surface finishes at superior feed rates in aluminum and other non-ferrous materials. This tool can also profile in some peripheral roughing applications. With its special geometry for process dampening, the AMF is a perfect choice for straight wall finishing.

MH-RO Multi-Flute Series

Technical Chart

The MH-RO series is a form relief design intended for peripheral roughing in carbon steels and cast iron. The multi-flute design allows for increased feed rates while not requiring massive amounts of horsepower. The tools are available from stock in stub and standard length with coatings for your ferrous machining applications.

SSDH Four Flute

Technical Chart

The SSDH series achieves superior chip flow and evacuation through the introduction of chip-release flute form technology, and a unique inter-flute helical transition all within a patent pending design. A premium, rupture resistant substrate is the foundation to which these progressive geometries are applied. The end result is a brute of an end mill, capable of ultra aggressive metal removal rates in ferrous material ranging from low carbon steel to high nickel alloys. This all adds up to cycle time reductions and improved machine tool productivity.

SSDH-C Four Flute

Technical Chart

SSDH-C series combines the aggressive roughing geometries of the SSDH series with a truncated knuckle O.D. form. This unique design allows for freer cutting and better chip control while maintaining the work piece surface finishes. These tools are stocked in stub and regular lengths and coated to match your particular application.

SS-3, Three Flute

Technical Chart

The SS series 3 flute end mill remains the workhorse when roughing in ferrous alloy applications. A standard corner radius protects the tool corner and enhances tool life in aggressive roughing applications. The SS series is offered in stub, standard, medium length and reduced neck.

- Standard Corner Radius to Protect Corners
- Roughing and Finishing Capabilities
- Available in Stub, Standard, Medium and Reduced Neck
- Available Upon Request:
 - Radius Ends
 - Coolant Grooves
 - Additional Coatings

SS-C Three Flute

Technical Chart

When machining a material that is gummy in nature, the 3 flute SS-C is the tool of choice. SS-C combines the proven SS family geometries with a truncated knuckle form that aids in chip size and form. Stub and standard lengths are available from stock.

SS-BN-3

Three Flute Ball Nose

Technical Chart

The SS-BN series is a great choice if your application requires 3-D, radius or contour work but with the added challenge of deep reaching cuts. The tools have a precision ground full radius and are stock with stub, regular and reduced neck.

SS-BN-C Three Flute Ball Nose

Technical Chart

The SS-BN-C incorporates the chipbreaker design which allows you to take advantage of this advanced design in contour, modeling and 3-D work without jeopardizing work piece finish.

SS-4, Four Flute

Technical Chart

The SS 4 flute has the same proven geometries as the original, but with an additional flute for increased productivity. A standard corner radius protects the tool corner and enhances tool life in aggressive roughing applications. The SS series is offered in stub, standard, medium and reduced neck.

- Standard Corner Radius to Protect Corners
- Available Upon Request:
 - Radius Ends
 - Coolant Grooves
 - Additional Coatings
- Roughing and Finishing Capabilities
- Available in Stub, Standard, Medium and Reduced Neck

SS-C Four Flute

Technical Chart

The SS-C four flute enable a 25% increase in feed rates. SS-C four flute is the tool of choice when periphery machining tuff gummy material. The geometries of the SS style tool along with the truncated knuckle form helps control the chip form and is freer cutting than traditional roughers.

Feeds and Speeds Chart with Chip-Load per/tooth

SS-BN-4 Four Flute Ball Mill

Technical Chart

Contour, radius and 3-D modeling in an extended reach application are a breeze with 4 flute SS-BN-RN series. Due to aggressive gash angles which allow for heavier chip loads as well as better chip evacuation when milling with the ball. This series is offered with stub, regular and extended neck.

SS-BN-C Four Flute Ball Nose

Technical Chart

The 4 flute SS-BN-C series combines the ultra-effective design of the SS geometry with a truncated knuckle form. This design is best utilized in gummy material applications as it helps manage chip size and flow.

SSI-5

Five Flute, Inch

Technical Chart

The SSI-5 is the all terrain vehicle of our ferrous alloy series tools. It can "chew up the road" in most roughing applications and at the same time provide smooth, high speed cruising well into finishing range. The SSI-5 will appeal to those who demand high performance and seek to minimize tool changes in a wide range of operations. This series has the addition of a Radius Program from stock.

SSI-5

Five Flute, Metric

Technical Chart

The SSI-5 is the all terrain vehicle of our ferrous alloy series tools. It can "chew up the road" in most roughing applications and at the same time provide smooth, high speed cruising well into finishing range. The SSI-5 will appeal to those who demand high performance and seek to minimize tool changes in a wide range of operations.

The SVI is a patented, five flute tool with both variable indexing and variable helixes. These features combine to provide the highest levels of protection against unwanted chatter and harmonics. The SVI-5 is the perfect tool for ramping at up to 3 degrees and helical interpolation of up to 3 degrees.

High Performance Carbide

- High Performance Carbide
- Eccentric Primary
- 45 Degree Helix
- Available in Stub, Standard, Medium, Long and Extra Long

- Available Upon Request:
 - Additional Coatings
 - Haimer Safe-Lock
 - Coolant Grooves

Our MH series is the tool of choice for finishing and light profile roughing in ferrous materials. The odd number of flutes disrupts unwanted harmonics. Our medium helix provides an optimum shear angle to aid chip evacuation. We have a full offering of stub, standard, medium, long and extra long lengths of cut.

Initial Speeds (SFM) and Feeds (Chip-Load per/tooth)

MH-CR Multi-Flute

Technical Chart

The MHCR series features our MH series as the platform to which a precision ground corner radius is applied, in a wide array of diameters and lengths, radii range from .030-.187". All of the tools are available from stock, which means no waiting for an altered tool.

The introduction of the TiW series was designed for thin wall machining of Titanium Aerospace Structures with walls 3 times or more the diameter in depth of wall. The TiW series has patented geometries which improve Process Dampening in machining thin wall structures.

Step-Cutting Rules of Thumb for Titanium

Waterline Machining Approach

- Step-Cutting for Finishing Ribs
- Length (L) / Thickness (T)
- Rough (R), Finish (F)
- Maintain an 8/1 L/T Ratio

EXAMPLE:
 $1" \text{ LR} / .130" \text{ TR} = 7.7$
 $.5" \text{ LF} / .060" \text{ TF} = 8.33$

MC Multi-Flute

Technical Chart

Data Flute is pleased to introduce its all new MC Series. This is a 15 degree helix, multi-flute tool designed primarily for cobalt chrome and other similar materials used in medical implants. Our MC Series is intended to run at accelerated feeds and speeds with light radial depths of cut. The geometry is also excellent for finishing walls in a variety of materials <54RC.

AMA , Multi-Flute

Technical Chart

The AMA series is designed for outstanding performance in nickel and cobalt based high temperature alloys, as well as other difficult to machine materials. The corrosion and heat resistance of the nickel and cobalt based metals give rise to corresponding machining challenges. Examples of frequently encountered nickel based alloys include Waspaloy, Hastelloy, Inconel 718 and Inconel 625. Cobalt based alloys include, but are not limited to, Stellite, Haynes 188 and Haynes 230.

S = SLOTTING
Axial Depth up to
1.0 x Diameter

HP = HEAVY PERIPHERAL
Axial Depth up to
1.5 – 2.0 x Diameter
Radial width .3 x Diameter

LP = LIGHT PERIPHERAL
Axial Depth up to
Effective Length of Cut
Radial width .02 x Diameter

FINISH = FINISH OPERATION
Axial Depth up to
Effective Length of Cut
Radial width .02 x Diameter

Feeds and Speeds Chart Explanation

The Feeds and Speeds Chart below provides an exercise on how to use the charts found with each series after Type and Diameter of tool is determined.

1. RPM and IPM are dependent upon material being machined.
2. Locate material that will be machined (Precipitation Stainless Steel in example below).
3. Determine starting SFM (80in example below).
4. Determine RPM based upon material and SFM. Multiply SFM by 3.82 divided by Tool Diameter=Starting RPMs.
5. Determine IPM based upon RPM and application (HP, LP or Finishing in example below). Multiply RPM by Chip Load per/Tooth by No. of Flutes=Starting IPM.
6. Based upon material and SFM selected, the application below would have a starting RPM of 611 with a starting feedrate of 12.22 IPM.

As always, should you have any questions, or if you are unsure of starting parameters for your application, **call us toll free at 800-447-1476** and ask to speak to our Technical Support Department.

Speed (SFM) and Feed (Chip-Load per/tooth (cpt))

$$\text{RPM} = \text{SFM} \times 3.82 / \text{Tool Diameter}$$

$$\text{RPM} = 80 \times 3.82 / .500$$

$$\text{RPM} = 611$$

$$\text{IPM} = \text{RPM} \times \text{CPT} \times \# \text{ of Flutes}$$

$$\text{IPM} = 611 \times .004 \times 5$$

$$\text{IPM} = 12.22$$

MH Series, 5 Flute

Initial Speeds (SFM) and Feeds (Chip-Load per/tooth)

Neck Relieved Tool Application and Trouble Shooting Guide

Neck Relieved Tool Application

Deep Pocket and Slot Milling

with Neck Relieved Series End Mills

Necked end mills for extended reach minimize tool deflection. The rigidity of these end mills enable multiple passes at faster feed rates. The appropriate depths of cut per pass are as follows: One half (1/2) times the diameter in ferrous materials and one (1) times the diameter in non-ferrous materials. The diagram at right shows 3 passes. The number of passes will vary, depending on depth of the pocket. Call us with your specific application.

Trouble Shooting Guide

PROBLEM	CAUSE	SOLUTION	PROBLEM	CAUSE	SOLUTION
Chipping	Feed too fast. Loose tool. Loose workpiece. Tool not rigid enough.	Reduce feed rate. Tighten screws. Tighten clamps. Try shorter length end mill.	Short Tool Life (Dull Teeth)	Cutting friction too great. Improper cutting angle.	Regrind more frequently. Adjust primary clearance angle.
Rapid Wear	Speed too fast. Hard metal. Feed rate too slow. Improper cutting angle. Primary relief angle too small.	Use slower speed. Add coating. Increase feed rate. Adjust cutting angle. Use larger relief angle.	Chip Packing	Cutting amount too great. Not enough chip room. Insufficient coolant.	Modify feed or speed rates. Use different end mill. Use additional coolant. Use air flow.
Breakage	Feed rate too fast. Cutting amount too large. Flute length too long. Too much wear.	Decrease feed rate. Take smaller cut per tooth. Try shorter flute length. Regrind sooner.	Rough Surface Finish	Feed rate too fast. Speed rate too slow. Too much wear. No end tooth concavity.	Decrease feed rate. Increase feed rate. Regrind sooner. Add more dish to bottom teeth.
Chattering	Feed and speed too fast. Machine and holder not rigid enough. Relief angle too great. Workpiece too loose. Cut too deep. Flute length too long.	Adjust feed and speed rates. Use appropriate machine or holder. Use smaller relief angle. Refixture part. Use shallower cut. Try shorter flute length.	Burring	Primary relief wearing. Improper cutting angle.	Regrind more frequently. Adjust cutting angle.

Tool Recommendation by Application

Bold=New Series / (M)=Metric Offering

Application	Suitable	Highly Recommended
Roughing//Slotting in Aluminum and Other Non-Ferrous Materials	ARF SERIES HSM SERIES HVM SERIES	TT SERIES (M) TT-C SERIES (M) ALDH ALDH-C

Standard Tolerances

Our state of the art equipment is designed to ensure consistency and accuracy tool after tool. Our standard cutting tools are manufactured to the following tolerances:

Cutting Diameter on Standard End Mills:

$+.000/-002"$

Shank Diameter:

$+.000/-0003"$

Ball Nose Radius:

$+.000/-001"$

Length of Cut

$+.030/-000"$

Length Below Shank

$+.030/-000"$

Overall Length

$+.062/-062"$

Cutting Diameter on Roughing End Mills:

$+.000/-005"$

Runout Tolerance:

.0005" maximum shank to cutting diameter on all series except long length and extra long length
